

Patient Information Display

Display The Patient Related Information At The Point-of-care

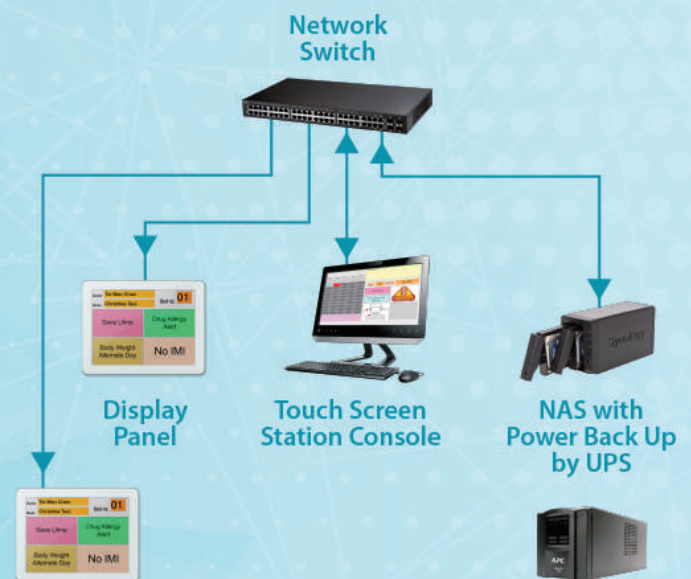

The Patient Information Display (PID) System is designed to reveal up-to-date patient related information at the point-of-care. Doctor & nurse information, bed number, warning notices, allergies, diet & nutrition recommendation and other medical information are available in a display for easy reading. Since the information is all digital, there is less chance of error which increases efficiency and safety.

Features

- Staff can easily manage the PID for all patients through the touch screen computer at nurse stations.
- WYSIWYG "what you see is what you get" user interface allows staff to manipulate the final layout while creating / editing information
- Self defining color values of words & background
- Data could be stored at the Network Attached Storage (NAS) for later retrieval
- Password system access control to protect patient privacy
- Fanless computer display panel deliver noise-free applications
- Uninterruptible Power Supply (UPS) ensures the operation in the event of an unexpected power outage
