

Early Alert Sensor Pad

Get to the patients before they could make it out of bed

Rondish 

The **Early Alert Sensor Pad** gives a true early warning to the caregiver. As soon as the patient sits on the edge of the bed, the alarm sounds. Allows caregiver to get to the patients **BEFORE** they could make it out of bed by themselves.

Default delay setting in the center greatly reduce the incidence of false alarms

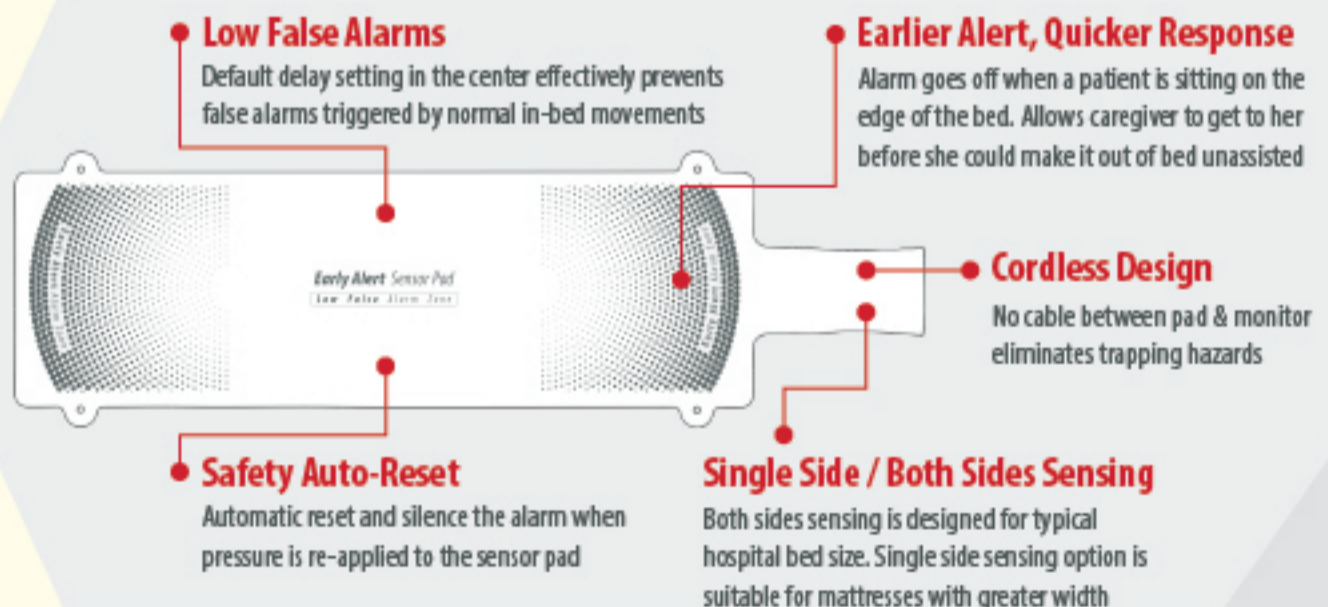

Repositioning in bed e.g. rolling over onto one side will not cause an alarm

Sensor pad initiates the alarm when patient sits up and moves toward the edge of the bed

Patented, Innovative Sensor Technology

Patented multi-zone detection has been designed to detect changes in patient position
